

Bochemit®

FORTE PROFI

PRODUCT SHEET

PREVENTIVE PROTECTION

- › Protects against insects and fungi in exteriors and in the ground
- › Vacuum-pressure impregnation
- › Water-leach resistant
- › NTR certificate

Bochemit®

FORTE PROFI

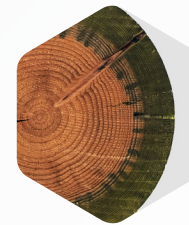

INTENSIVE WOOD PROTECTION UNDER WEATHER CONDITIONS AND IN CONTACT WITH THE GROUND

The combination of highly effective biocidal substances reliably protects wood against wood-destroying fungi and wood-boring insects. A balanced combination of surfactants ensures excellent wetting of the wood and facilitates the penetration of the product into the wood during impregnation. Once the product is fixed into the wood, the active substances can no longer be leached out of the wood.

Bochemit Forte Profi is the best choice for protecting all types of wooden elements in exteriors and in contact with the ground, such as benches, garden furniture, fences, palisades, animal enclosures, poles, and stakes. It is also suitable for processing difficult-to-impregnate wood species (European and Russian wood species).

PERFECTLY
TREATED
WOOD

VACUUM-PRESSURE IMPREGNATION (VPI)

THE MOST EFFECTIVE METHOD OF IMPREGNATING WOOD IN LONG-TERM DIRECT CONTACT WITH THE GROUND (USE CLASS 4)

When the required storage conditions are maintained, Bochemit Forte Profi (both the concentrate and its working solution) is chemically stable and does not decompose. Therefore, no phase separation or loss of active substance content occurs.

Bochemit Forte Profi working solutions are non-corrosive to standard structural steel.

During vacuum-pressure impregnation, an even distribution of active substances into the treated wood is achieved.

PREVENTIVE PROTECTION OF WOOD IN CONTACT WITH THE GROUND

CONCENTRATED LIQUID FUNGICIDAL AND INSECTICIDAL AGENT FOR LONG LASTING WOOD PROTECTION AGAINST WOOD-DESTROYING INSECTS AND FUNGI. SUITABLE FOR WOOD PROTECTION IN INTERIOR (USE CLASS 1, 2 - WOODEN ROOF CONSTRUCTIONS) AND EXTERIOR (USE CLASS 3 - COLUMNS, POLES, FENCES, PERGOLAS), EVEN IN THE CASE OF CONSTANT CONTACT WITH THE GROUND (USE CLASS 4 - FENCES, POLES, COLUMNS, PALISADES, BRIDGES).

- › No film remains on the surface of the treated wood that could peel off, the wood is odorless.
- › The treated wood is free of any oily or greasy appearance and is colourfast, even under weather conditions.
- › Bochemit Forte Profi is available in two colour variants. After impregnation, the wood acquires an olive green or brown shade.
- › The wood is paintable after drying.
- › The lifespan of the applied wood protection in exteriors is a minimum of 15 years, for wooden elements in interiors, the lifespan of the applied protection is unlimited.

WOOD CARE SINCE 1968

WHY BOCHEMIT

- › **BOCHEMIT** represents more than 50 years of experience in developing professional products for the protection of structural timber.
- › **BOCHEMIT** meets all current European standards and regulations governing the certification of agents.
- › **BOCHEMIT** has its own R&D centre specifically focused on the research and development of wood preservation products.

PROTECTING WOOD FOR OVER 50 YEARS

- › **BOCHEMIT** products are constantly being enhanced and innovated to meet the latest market trends and customer requests.
- › **BOCHEMIT** perfectly penetrates wood in a rapid and uniform way, and subsequently protects it.
- › **BOCHEMIT** means more than just products, it stands for technical assistance and support. Our experts are ready to help you with impregnation technology for various types of wood, provide ongoing advisory services, and assist with setting the correct concentration of application solutions.

WHY BOCHEMIT FORTE PROFI

Bochemit Forte Profi is one of the few products on the European market to have held an EU Authorisation since 2017, in accordance with Regulation (EU) No 528/2012 of the European Parliament and of the Council concerning the making available on the market and use of biocidal products. The documentation regarding, among other things, health risks associated with the application of the product, as well as risks that may arise secondarily upon contact with objects treated with Bochemit Forte Profi, is part of the Assessment Report for the Authorisation.

The effectiveness of Bochemit Forte Profi against biological agents has been tested according to European standards in accredited laboratories and is verified by ongoing, long-term field tests under real climatic conditions in Germany, Denmark, Sweden, and the tropical climate of Malaysia.

Bochemit Forte Profi has long been successfully used by industrial wood processors across Europe.

The quality of Bochemit Forte Profi is guaranteed by obtaining the NTR certificate (one of the most demanding certificates in Europe) issued by the Nordic Wood Preservation Council.
