- › It is also suitable for the quick and simple revival and brightening of greyed wood and wooden elements.

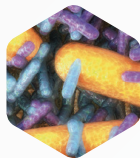

RELIABLY ERADICATES

MOULDS

ALGAE

YEASTS

- › You can find the selection of suitable biocidal impregnation at www.bochemit.eu
- › Use biocides safely. Always read the label and product information before use.

THE DANGER OF MOULDS IN YOUR HOME OR OFFICE

Mould infests homes and working environments where humid, dark and poorly-ventilated conditions persist, such as basements, shower cubicles, corners, cellars and refrigerators. Mould spores commonly spread through the air and stick to all kinds of surfaces.

Where conducive conditions exist, mould grows and continues to grow through airborne spores. This can damage the surfaces where these growths are found. Rooms with extensive mould growths have an increased volume of spores which may be inhaled or come into contact with skin. Although mould is not always harmful to health, inhaling and coming into frequent skin contact with mould on a regular basis can lead some people to suffer from minor and acute health problems:

- › Allergies
- › In severe cases, they contribute to the development of asthma
- › Weakened immunity
- › Burning sensation on the skin, in the eyes, nose, throat and lungs
- › Mycotoxins produced by moulds can cause cancer, liver damage, and nervous system damage

YIELD
from 1 kg
up to 20 m²

Bochemit®

WOOD CARE SINCE 1968

WHY BOCHEMIT

- › **BOCHEMIT** represents more than 50 years of experience in developing professional products for the protection of structural timber.
- › **BOCHEMIT** meets all current European standards and regulations governing the certification of agents.
- › **BOCHEMIT** has its own R&D centre specifically focused on the research and development of wood preservation products.

PROTECTING WOOD FOR OVER 50 YEARS

- › **BOCHEMIT** products are constantly being enhanced and innovated to meet the latest market trends and customer requests.
- › **BOCHEMIT** perfectly penetrates wood in a rapid and uniform way, and subsequently protects it.
- › **BOCHEMIT** means more than just products, it stands for technical assistance and support. Our experts are ready to help you with impregnation technology for various types of wood, provide ongoing advisory services.

WHY BOCHEMIT MILDEW REMOVER

Bochemit mildew remover is a proven product with long-standing verified effectiveness and an immediate visible effect. It reliably eradicates moulds, fungi, algae, lichens, and yeasts while simultaneously disinfecting the treated surfaces. Thanks to the practical spray bottle, it is easy to apply even to hard-to-reach areas in bathrooms, kitchens, cellars, garages, and other humid spaces. In addition to eliminating moulds, it also helps revive and brighten greyed wood and wooden elements.

Application

The product is not to be diluted! It is applied by spraying. Do not remove the mould before spraying to prevent the dispersal of dangerous spores. Spray Bochemit mildew remover onto the infested areas from a distance of 10–15 cm and let it take effect. After 15–20 minutes, rinse the treated area with water or allow the product to dry. In case of heavy infestation, repeat the process several times. One kilogram of the product treats approximately 20 m² of plaster, wall, or wood. It has no preventive effect.
